

Note to editor

Since the start of 2021 high income countries have on average been vaccinating citizens at a rate of 1 dose per second.

The average daily COVID-19 vaccination doses administered (7-day smoothed) between January 1st and March 2nd 2021 was drawn from OurWorldInData¹ for countries classified as 'High Income' by the World Bank. An hourly rate was calculated by assuming countries are vaccinating 8 hours per day which was then divided into minutes and seconds. The average of these per second rates for these 68 high income countries was then calculated at 1.1 doses per second or 66 per minute. The figures averages include 6 High Income countries that have not yet begun vaccinating citizens.

Country	Covid-19 vaccine administered per day (7 day smoothed)	per hour	per minute	per second
